

ABSTRACT OF THE DISCLOSURE

An imaging portion performs imaging of a subject.
A time lapse imaging condition setting portion sets
a time lapse imaging condition including at least
5 an exposure time and an imaging interval, prior to
the imaging of the subject by the imaging portion.
A determining portion determines a contradiction of
the time lapse imaging condition set by the time lapse
imaging condition setting portion according to a
10 predetermined criterion. A presenting portion presents
at least information relating to the contradiction of
the time lapse imaging condition based on a determined
result by the determining portion.
